Capabilities for Osteopathic Practice

Authors:
Caroline Stone, Prof Paul Hager and Prof David Boud
University of Technology Sydney (UTS)
Funded by the New South Wales Osteopathic Registration Board
January, 2009
Preamble

Although osteopathy is a practice commonly associated with musculo-skeletal medicine such as management of biomechanical back and neck pain, sports and workplace injuries, muscular and articular trauma and dysfunction, people consult osteopaths for many other reasons.

The scope of osteopathic practice is identified through its place as a healthcare system for helping people maintain and restore health and well being. This includes many who are suffering a variety of problems and others for example who seek health education and support. This typically includes those with medical pathologies, general health problems, wellness, rehabilitation, injury management, and dysfunction and disease throughout all ages, for all types of people. This wide scope of practice arises through a professional philosophy that places treatment emphasis on the person - not their disease, dysfunction or disorder. Within this emphasis patient conditions remain key to osteopathic clinical analysis, including medical differential diagnostic reasoning and determining a plan of care within an integrated healthcare system involving many different healthcare practitioners and providers.

A primary component of osteopathic evaluation and care is the use of palpation and interpretation of tissue states through the medium of touch, and the delivery of treatment options by various manual manoeuvres and actions. A highly developed skill in interpreting palpatory findings informs many clinical analytical processes in the course of osteopathic practice and delivery of care to the person. Osteopathic philosophy places strong emphasis on relating palpatory findings and tissue states to an analysis of underlying physiological processes, pathological states, responses to injury and the adaptations the body makes in response to a variety of bio-psycho social stressors*. Changes to the physical structure of the body’s tissues and biomechanics are interpreted with reference to their impact on circulation, neural activity, general physiological processes and homeostatic mechanisms of the body. Osteopaths acknowledge the relevance these changes have for the body’s overall function and susceptibility to disease and injury and for its self-healing mechanisms. Osteopathic philosophy in relation to treatment incorporates the concept that addressing changes to tissue state, mobility and efficient function throughout the body will improve biomechanical, hydraulic, circulatory and respiratory function, thus improving health and the body’s ability to recover from injury and disease, reduce the impact of pathology and contribute to the restoration of general well-being. Osteopathic philosophy acknowledges that there are many ways of helping an individual through the application of osteopathic principles in practice, enabling individual osteopathic practitioners to each focus on varied components of a patient’s presentation and situation and to each utilise an element of personal professional choice in their patient management.

The capabilities required for osteopathic practice in the light of the above approaches to patient care and health management as part of an integrated healthcare delivery system are complex and varied. Many skills, competencies and attributes are required at many different stages of interaction with a patient and the wider healthcare community and are never used in isolation. As such the capabilities outlined in this document should be reviewed accordingly.

Framework

The capabilities for osteopathic practice have been arranged within 6 domains. These reflect the model that professional capability is an expression of integrated skills, knowledge and attributes.

The domains are not listed hierarchically or linearly, but are designed to be reviewed as an integrated whole.

Domains

Clinical Analysis
Person Oriented Care and Communication
Osteopathic Care and Scope of Practice
Primary Healthcare Responsibilities
Interprofessional Relationships and Behaviour
Professional and Business Activities

Each capability is illustrated by a more detailed description and a list of elements indicating some of the key features of the area concerned. These elements are further illustrated by a number of criteria.

* Engel’s definition (1997): A bio-psychosocial model of healthcare means that symptoms should be conceptualised as the result of a dynamic interaction between the psychological, social and pathophysiologic variables.
1. **Clinical Analysis**

**Descriptor**

This capability incorporates an osteopath’s ability to gather information about a patient’s health from a bio-psychosocial and environmental perspective. This should inform examination and screening, diagnosis, prognosis, condition and health management from a patient-oriented context. This diagnosis and care plan should reflect the complex bio-psychosocial and environmental nature of the presentation and include ongoing review. It incorporates an understanding of clinical complexity and uncertainties and the professional commitment to manage these components within patient care.

**Elements**

1.1. Gathers, organises and records a focused personal health record

1.2. Synthesizes information into a suitable working diagnosis and an understanding of general health status

1.3. Devises and instigates a plan of care addressing the person’s presenting disorder and their general health, in consultation with that person (or their representative or carer)

1.4. Establishes a prognosis, appropriate outcome measures, reviews patient progress and modifies plan of care as required

1.5. Recognises when further information is required

1.6. Critically reflects on clinical challenges and uncertainties

<table>

| 1.3. Devises and instigates a plan of care addressing the person’s presenting disorder and their general health, in consultation with that person (or their representative or carer) | 1.3.1 Plan of care is negotiated that is, relevant and appropriate to person’s presenting complaint  
1.3.2 Plan of care is within the context of the person’s general health  
1.3.3 Plan of care evolves as required throughout a person’s life according to their changing needs and mindful of their changing bio-psychosocial attributes as they age  
1.3.4 Changes to a patient’s bio-psychosocial health are reviewed over time, whether related to their presenting complaint or not, and any relevant action taken accordingly  
1.3.5 Plan of care and supporting evidence is appropriately noted in patients’ records |
| 1.4. Establishes a prognosis, appropriate outcome measures, reviews patient progress and modifies plan of care as required | 1.4.1 Prognoses are developed, and appropriate care is determined on that basis  
1.4.2 Appropriate outcome measures are utilised to monitor progress which is either a negotiated patient centred outcome, or by the use of an appropriate valid and reliable outcome instrument  
1.4.3 Practitioner reviews progress and elicits feedback on an ongoing basis  
1.4.4 Practitioner recognises when outcomes differ from those expected, can identify why and acts accordingly  
1.4.5 Maintains a commitment to delivering well integrated and coordinated care for all patients, including those with multiple, ongoing and complex conditions |
| 1.5. Recognises when further information is required and acts appropriately on all information received | 1.5.1 Case review is capable of identifying if information is lacking or needs investigation  
1.5.2 Practitioner responds accordingly to cues emerging from case review  
1.5.3 Recognises when to withdraw or modify plan of care |
| 1.6. Critically reflects on clinical challenges and uncertainties | 1.6.1 Recognises and remains open to clinical challenges and uncertainty  
1.6.2 Adjusts plan of care and professional behaviour on an ongoing basis in response to such challenges |
2. Person Oriented Care and Communication

Descriptor

This capability incorporates an osteopath’s ability to adapt the consultation process to the individual. This involves being sensitive to their needs and goals, recognising their central place in ongoing decision making, whilst displaying cultural awareness. This encompasses the osteopath orienting their communication to best aid the individual in decision making. It also includes education about the diagnosis, prognosis, proposed management plan, self-management and other options of care that may become appropriate over time.

Elements

- 2.1. Considers socio-cultural factors in communication and management strategies
- 2.2. Uses appropriate questioning strategies
- 2.3. Ensures patient and/or care giver comprehension
- 2.4. Ensures patient’s goals and concerns are identified and integrated into the clinical analysis
- 2.5. Obtains consent having discussed risks and benefits
- 2.6. Communicates clearly with respect to diagnosis, prognosis, possible management plans, self management and other options of care
- 2.7. Takes account of previous patient/care giver experiences of health care of medical and allied health systems
- 2.8. Understands the complexity of therapeutic relationships and has the professionalism to engage in appropriate levels of interaction and care
- 2.9. Ensures a professional commitment towards patient / care giver trust, confidentiality, safety and patient oriented care
- 2.10. Understands when a representative, carer or family member communicates on behalf of, or in conjunction with the patient and / or care giver is required, and acts accordingly

<td>----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| 2.6. Communicates clearly with respect to diagnosis, prognosis, possible management plans, self management and other options of care | 2.6.1 The goals, nature, purpose and expected outcomes of osteopathic intervention are discussed and agreed  
2.6.2 Appropriate warnings regarding possible adverse effects are identified for the person and discussed  
2.6.3 Options for the person’s self care are identified and discussed, such as exercise, diet, lifestyle and workplace ergonomics  
2.6.4 Prepares the patient and/or care giver for ‘follow up’ where appropriate |
| 2.7. Takes account of previous patient and/or care giver experiences of health care in medical or allied health systems | 2.7.1 Gathers information regarding the person’s previous health care experiences of medical and allied health services  
2.7.2 Recognises where this creates particular concerns for the person regarding their ongoing care, and acts accordingly |
| 2.8. Understands the complexity of therapeutic relationships and has the professionalism to engage in appropriate levels of interaction and care | 2.8.1 Acts appropriately in situations involving personal incompatibility with the patient and/or care giver  
2.8.2 Manages clinical challenges and uncertainty within therapeutic relationships appropriately |
| 2.9. Ensures a professional commitment towards patient trust, confidentiality, safety and patient oriented care | 2.9.1 Recognises if patient trust or safety is undermined and acts accordingly  
2.9.2 Ensures appropriate levels of patient confidentiality throughout the osteopathic management of the patient  
2.9.3 Continuously reflects on the respectful patient-centeredness of the osteopathic management of the patient  
2.9.4 Builds an effective patient and/or care giver rapport, treatment agreement and therapeutic alliance |
| 2.10. Understands when a representative, carer or family member is required to communicate on behalf of, or in conjunction with the patient and acts accordingly | 2.10.1 Communicates effectively through, or with, a patient’s representative, carer, or family member as required  
2.10.2 Ensures appropriate consent is gathered on behalf of the patient and that effective review of communication is undertaken  
2.10.3 Understands when a representative, carer or family member is required to communicate on behalf of, or in conjunction with, the patient, and acts accordingly |
3. Osteopathic Care and Scope of Practice

Descriptor

Osteopathic philosophy encompasses the ability of practitioners to adopt an individualised approach to patient care, within general osteopathic approaches to patient care. This capability addresses the way that the general and individual approaches to patient care are related to and integrated into general healthcare concepts and practices. In so doing, practitioners must be cognisant of general and personal limitations of practice. This capability includes reflection and revision of healthcare delivery based upon an evidence informed rationale.

Elements

3.1. Implements an appropriate management plan that reflects the application of osteopathic philosophy
3.2. Understands and can appropriately employ a variety of osteopathic examinations and treatment techniques and approaches
3.3. Recognises and acts within the scope of osteopathic practice
3.4. Where the patient has a condition that requires other medical assessments and / or interventions the osteopath identifies how any ongoing osteopathic care of the person should be adapted
3.5. Adapts ongoing care of a patient to their general health and wellbeing needs and to their age and circumstances
3.6. Identifies how their personal professional approach to patients is placed within general osteopathic healthcare philosophy and practice
3.7. Recognises and acts within scope of personal osteopathic capabilities
3.8. Modifies and adapts management in accordance with osteopathic practice

4. Primary Healthcare Responsibilities

Descriptor

This capability incorporates an osteopath’s role in the delivery of primary health care, both as a primary contact practitioner and as a member of the healthcare community. This capability requires the osteopath to be knowledgeable about health, disease, disease management and prevention and health promotion. It incorporates an osteopath utilising healthcare networks and community services and referral as necessary.

Elements

4.1. Accepts shared responsibility for a patient’s health
4.2. Recognises and responds to professional capabilities and limitations, as a primary healthcare provider
4.3. Relates effectively and knowledgeably with other health and community services or providers
4.4. Facilitates an individual’s access to appropriate health and community services
4.5. Accepts responsibilities as a primary health care practitioner in relation to guidelines and ethical standards, as issued by appropriate bodies and authorities
4.6. Ensures awareness of costs associated with healthcare, and the principles of efficient and equitable allocation and use of finite resources
4.7. Maintains commitment to principles of health education, disease prevention, rehabilitation and amelioration of pain and suffering
4.8. Ensures ability to carry out basic first aid and life-saving procedures as required

<table>
<thead>
<tr>

</thead>
</table>
| 4.4. Facilitates an individual’s access to appropriate health and community services, including family and carer support | 4.4.1 Practitioner identifies suitable health and community services from which the person may benefit  
4.4.2 Practitioner facilitates where appropriate the person’s access to these services |
| 4.5. Accepts responsibilities as a primary health care practitioner in relation to guidelines and ethical standards, as issued by appropriate bodies and authorities | 4.5.1 Practitioner maintains awareness of appropriate guidelines, ethical standards and other publications as issued by appropriate bodies and authorities  
4.5.2 Practitioner ensures compliance, where required, with guidelines and ethical standards  
4.5.3 Practitioner issues advice within these guidelines and ethical standards |
| 4.6. Ensures awareness of costs associated with healthcare, and the principles of efficient and equitable allocation and use of finite resources | 4.6.1 Costs associated with healthcare for the patient, osteopath and healthcare system are continuously monitored and analysed  
4.6.2 Maintains a commitment to efficient and equitable allocation and use of resources |
| 4.7. Maintains commitment to principles of health education, public and occupational health, disease prevention, rehabilitation and amelioration of pain and suffering | 4.7.1 Identifies appropriate strategies concerning health education, public and occupational health, disease prevention for patient, or refers appropriately  
4.7.2 Ensures plan of care reflects commitment to rehabilitation and amelioration of pain and suffering  
4.7.3 Ensures emphasis in health education and involvement of the patient and/ or carer in the plan of care conception and delivery  
4.7.4 A commitment to improving the health literacy of the patient and/ or care giver is maintained  
4.7.5 Maintains a commitment to preventative care strategies  
4.7.6 Identifies appropriate IT tools and electronic media to facilitate personal and patient access to healthcare information and resources |
| 4.8. Ensures ability to carry out basic first aid and life-saving procedures as required | 4.8.1 Able to perform basic life-saving and first aid  
4.8.2 Where regulatory authorities require first aid certification that this is maintained appropriately |
| 4.9. Regarding risk to patient’s legal responsibility Privacy Act and situation with minors and patients that have lost autonomy (dementia patients) | 4.9.1 Situations where the patient does not have the autonomy of choice require that appropriate legal process has been followed and the care giver that is making the patients choice has the legal right to do so. |
5. Professional Relationships and Behaviour

Descriptor

This capability incorporates an osteopath’s actions in appreciating, respecting and operating in an educated, sensitive and informed manner with other healthcare providers. This includes how an osteopath acknowledges the values and procedures of those other individuals and groups and how the osteopath can best facilitate the most appropriate care.

Elements

5.1. Demonstrates the ability to work as part of a network of osteopaths and other disciplines and providers via respectful, effective and efficient communication

5.2. Recognises how to implement a multidisciplinary approach through referral and co-management, and intra and inter-professional education

5.3. Implements the appropriate multidisciplinary care for the individual

5.4. Maintains effective lines of communication with other parties

5.5. Maintains a strong understanding and critical review of osteopathic philosophy and professional ethos and its place in general healthcare systems

5.6. Maintains understanding of other approaches to healthcare, and their contribution to patient management

<table>
<thead>

</table>
| 5.4. Maintains effective lines of communication with other parties | 5.4.1 Where the osteopath continues to be one of the patient’s carers, communication within the care network is maintained at an effective level to ensure patient care is optimised  
5.4.2 Fosters and supports clinical training opportunities that support interdisciplinary learning |
| 5.5. Maintains an understanding and critical review of osteopathic philosophy and professional ethos and its place in general healthcare systems | 5.5.1 Undertakes appropriate, continuing, lifelong learning to ensure currency of understanding of osteopathic philosophy and professional ethos  
5.5.2 Critically reflects on the relationship between osteopathic practice and other healthcare systems, and the impact this has for overall patient care  
5.5.3 Contributes to the guiding and mentoring of fellow and future osteopaths as they become guardians and custodians of the profession’s philosophies, knowledge and skills |
| 5.6. Maintains awareness of other approaches to healthcare, and their contribution to patient management | 5.6.1 Undertakes appropriate continuing lifelong learning to ensure awareness of other healthcare practices and approaches to healthcare and patient management  
5.6.2 Critically reflects on the awareness this has to delivery of overall patient care |
6. Professional and Business Activities

Descriptor

This capability incorporates an osteopath’s actions and responsibility relating to the development of themselves and their practice. It also incorporates their actions and accountability in managing the healthcare, regulatory and business systems of practice life.

Elements

6.1. Ensures ethical conduct of self and others in provision of care and services
6.2. Provides for continuing professional learning for self and employees
6.3. Ensures care of self
6.4. Maintains an appropriate physical environment for privacy, comfort, and confidentiality
6.5. Manages all aspects of practice to comply with legal and regulatory requirements (as a sole operator or as an employer of others)
6.6. Manages risk effectively and responsibly in such a way that minimises impact on all concerned.
6.7. Maintains currency of knowledge and skills according to changes in regulatory and other ethico-legal requirements and practice environments over time
